

## Installing Python on windows for the Generator builds:

You can download python for windows here:

<https://www.python.org/downloads/windows/>

Make sure you install version 2.7.X or higher, not 3.X.

During installation make sure you select the following options:

Install for all users.

Make sure you enable Python.exe to your Path.

Once python is installed, update the PIP in the command boc, using the following command:

***python -m pip install --upgrade pip***

You are now running the latest PIP. Next install JSONREF using the following command:

***pip install jsonref***

And done !
